CAREER OBJECTIVE

To enhance my professional skills in a dynamic and stable work space and to use my skills in the best possible way for achieving the company's goals. And self-driven and highly motivated to learn new technologies.

EDUCATION

VR Siddhartha Engineering College

2017 | Vijayawada - AP

CIVIL ENGINEERING

CGPA 6.6

NRI Junior College

2013 | Guntur - AP

BOARD OF INTERMEDIATE EDUCATION - AP

Marks Percentage - 86.7%

Sarada Vidyalayam

2011 | Narasaraopet - AP

BOARD OF SECONDARY EDUCATION - AP

Marks Percentage - 87%

PROFESSIONAL EXPERIENCE

TECNICS

01/2025 – 06/2025 | HYDERABAD, INDIA

Full Stack Developer

- As a Full Stack Developer intern involved in the SAP Data Migration project, I help in developing new features, fixing issues, and proactively preventing any interruptions in the end-to-end data flow.
- Using defined mapping rules, I has implemented excel data validation and built post-load validation in Python and Pandas.
- Examined the project architecture from file uploading to eventual validation output as per SAP migration requirement standards.
- Data quality was improved by cleaning raw excel inputs, applying transformation rules, and generating structured results for migration.
- I developed React components that are responsible for upload files and validation dashboards from the user and also Django REST APIs to allow the frontend process workflows to link with the backend validation process.

Algonox

09/2024 – 12/2024 | HYDERABAD, INDIA

Python Developer

- worked as a Python developer to support the Capgemini AI/ML project by addressing tickets and guaranteeing smooth workflow.
- learned how to validate documents using pre-established business rules, from data injection to successful validation.
- In order to ensure seamless integration with business rules validation procedures, I examined and studied the project source code beginning with data extraction by ABBYY bots.
- By locating missing or unextracted data and addressing conflicts, I helped with manual validation and helped ensure accurate document processing.
- learned and used AWS for testing and local environments, guaranteeing dependable and scalable deployment setups.
- Several phases of the validation pipeline, including modular features for effective processing, were managed using Docker containers.
- Business rules and extracted data were stored in MySQL databases, guaranteeing organized data management and retrieval.

Skills: Python, Flask, ORM, Rest API's, MySQL

Tools: Vs Code, Git , WinSCP , PuTTY , SQL Server Studio

PIXL

06/2024 – 08/2024 | HYDERABAD, INDIA

Python Developer

- I worked as a Python developer throughout my internship, working on two different projects: Fincalis, a lending application, and Medchoice, a medical treatment application.
- I have experience working with Python for backend development using Django and ORM to manage databases, building REST APIs for seamless communication, and leveraging ReactJS for dynamic frontend interfaces.
- In one of these two projects, I wrote the code to create auto log files, models, and a few APIs; In the other project, I oversaw the complete admin and user interface project. building database tables, developing Rest APIs, testing them with Postman, and forwarding them to UI devs for integration.

Skills: Python, Django, ORM, Rest API's, MySQL, ReactJs, Java Script

Tools: Vs Code, XAAMP, Git, Postman

SKILLS

Skills

Python, Pandas (Data Frames), OOPS(python), Django, Flask, Rest APIs, ReactJS, ORM, MySQL, Mango DB, HTML5, CSS, Bootstrap, Java Script

Tools

Vs code, XAAMP, Git, Redux, POSTMAN

PROJECTS

MediDoc AI Bot

- Used to analyze medical PDF documents and provide accurate, context-aware answers to user queries without manual document review.
- Implemented document chunking and semantic indexing using LlamaIndex and ChromaDB for efficient similarity-based retrieval.
- Designed a caching mechanism to reuse existing vector indexes and prevent redundant document processing, improving performance.
- Integrated a Retrieval-Augmented Generation (RAG) pipeline to retrieve relevant document context and generate grounded responses.
- Enabled real-time, streaming-based answer generation for interactive medical document querying.

Gully Grocery

- Developed "Gully Grocery," a comprehensive online platform enabling convenient shopping for users while empowering vendors to manage their operations efficiently.
- Allows users to browse and search for products, add items to the cart, manage orders, securely process payments, receive location-based vendor recommendations, and track orders in real time with updates.
- Enables vendors to monitor income statistics, manage inventory levels, track customer orders, and analyze popular products and sales trends, all through an intuitive dashboard.
- Built with React.js for the frontend, Flask for the backend Rest Api's, and MongoDB for database management.
- Postman for API testing, and Git for version control.

TravelGuider

- Designed a Tourist Website in which It allow the users to search Tourist places, Hotels and Restaurants.
- By using the location name to search on Google Maps, this project allows us to view hotels, restaurants, and other destinations.
- For this project, I used ReactJs and linked the Google Maps External React Library with a Rapid API.
- I have utilized Browser Router for navigation, functional components, props, and hooks to control the state and API HTTP calls.
- Here, I imported pre-existing external modules such as react-bootstrap, module.css, axios, and react-router-dom.
